

Brain Imaging Study

The NYU Child Study Center with the Mental Health and Addictive Disorders Research Program is looking for volunteers to participate in an imaging study about brain processes related to cocaine addiction.

We are seeking participants between **ages 18 to 50** who:

- Have a prior history of cocaine dependence
- Are abstinent from cocaine use for at least two weeks prior to visit
- Are right-handed and able to have a magnetic resonance imaging (MRI) scan (cannot have a pacemaker or any metal objects in the body).

Participation requires at least 2 study visits

Compensation for time and travel is provided.
