MEDICINE

NEW YORK UNIVERSITY

Changing the Face of Child Mental Health

## **New York University Child Study Center**

**Does your child have repetitive movements such as  
eye blinking, neck rolling or shoulder shrugging?**

**Does your child make repetitive sounds such as  
throat clearing, coughing or sniffing?**

**Your child could have a tic disorder or Tourette's Disorder.**

If so, your child may be eligible for a new treatment study. The NYU Child Study Center is currently evaluating children and adolescents with tic disorders or Tourette's Disorder between the ages of 6 and 18 to determine if they qualify to participate in a research study and receive specialized professional care.
